

AirCommand 1™

AirSupport LLC is continuously raising the industry standard for producing high quality, safe and profitable airshows. Recently, they've added AIRCOMMAND 1, a state-of-the-art mobile airshow support system that offers a degree of operational efficiency and safety unmatched in the airshow industry.

Purpose built for airshow management, the mobile unit is equipped with the latest and most advanced interactive aviation technology. AIRCOMMAND 1™ was designed and built-in cooperation with a nationally respected engineering school and is fully networked and satellite capable.

The multi-purpose trailer serves as the epicenter of air traffic control, housing the airboss as well as key ground and air operations managers. Its command cab, stands over thirteen feet tall -- affording a birds-eye view of the flight line, crowd line and airspace. AirCommand's first of its kind total glass enclosure offers an incomparable 360 degree, horizon-to-horizon view.

The unit is a totally custom fabricated system built literally from the ground up to serve the airshow industry. The vehicle itself is over 28' long and features an enclosed 12.5' x 8' cab that accommodates 5 work stations plus additional observers. The open roof top deck is equipped with an aluminum safety railing system and includes a work station system that may be deployed on either side to provide up to 5 work stations for event announcers and other personnel. Space is available for additional personnel on the roof as necessary. Additionally, the interior lower-level work area has 3 work stations and room for 5 additional personnel.

The unit has multiple communications capabilities that can be customized to meet specific event needs, including redundant airband communications, redundant broadband Internet capability, UHF & VHF transceivers with repeater support to interface with existing ground-based communication systems and satellite telephone capability is also provided. There are also dedicated onboard systems for extensive real time air traffic and weather safety monitoring. The unit is fully air conditioned and has on-board redundant electric power.

Features such as these provide a level of operational ability and safety enhancement unavailable in any other system including fixed airport control towers. In addition, AIRCOMMAND 1 is equipped for state-of-the-art sound and communications processing. Its placement at show center gives airshow management an unparalleled edge in operating a safe and successful event.

AirSupport LLC. is a full service aviation event planning and management firm located in Naples, NY. Founded in 1995, it has been involved in the planning, management and operation of numerous aviation events through out the US.
